WORK EXPERIENCE

Software Engineer

The Compuflex Corporation, Springfield, NJ | 2018-Present

- Designed and developed a web-based, containerized version of flagship cash automation solution, reducing installation and setup overhead by 99% for financial institutions; utilized WebSockets, C#, .NET, TypeScript, Java, Docker and React.
- Engineered a retail till management solution that reduced internal theft and increased retail client revenue by 5%; Components include a GraphQL API (Node.js), serverless cash monitoring (AWS Lambda/SES), and desktop UI (React/Electron/Zustand).
- Led a team of 4 junior developers, conducting daily stand-ups and weekly knowledge-sharing sessions, reducing onboarding time from 3-5 months.
- Revamped company DevOps strategy using Jenkins, Azure DevOps and Git achieving a 10% faster project delivery and surpassed technical requirements for over three major software releases.
- Delivered critical updates on time, ensuring SLA compliance for key clients, including a financial institution with over 2,000 branches and 70,000 employees.

Intern

The Compuflex Corporation, Springfield, NJ | 2017-2018

- Modernized and rebuilt company website with Laravel and PHP, enabling non-technical staff to create, edit, and delete pages.
- Worked with marketing team to create a custom blog component for posting updates about the company and products,
- Migrated web server from local server to managed AWS EC2 instance reducing IT management costs by 5%.

CONTRACT WORK

Jersey Cat Cafe, E-Commerce Solution

Jersey City, NJ | 2023

- Designed and developed a custom e-commerce solution for a local cat cafe integrating the PayPal API and eliminating the need for more expensive platforms. Complete with a REST API (Node.js), SQL database (MySQL), NoSQL (MongoDB) database and a UI (React/Redux).
- Used AWS Lambda for serverless operations.

SurvElect, Voter Database Software

Linden, NJ | 2018

- Crafted and maintained a robust MVC voter database using Node.js, React and TypeScript that included user authentication, a voter search engine, an efficient phone-banking system, and advanced export functionalities using data from 25,000+ registered voters.
- Managed cloud-based services in AWS including EC2, Route 53, RDS and Amazon SES reducing campaign costs by 10%.

EDUCATION

B.S. in Computer Science

Kean University

2018

SKILLS
