WORK EXPERIENCE

Software Engineer

The Compuflex Corporation, Springfield, NJ | 2018-Present

- Lead Engineer for a web-based cash automation solution using WebSockets, reducing installation overhead for clients and integrating 5 devices from different manufacturers. Components built in C#/.NET, TypeScript, React and Java.
- Created a spec for and implemented a customizable backroom till management system enabling retail clients to increase efficiency in distributing start funds and reducing dual entry. Including a REST API built in Node.js, desktop application built in Electron / React and a device controller built in C#.
- Created a supportive environment for 4 new team members, reducing onboarding time from three months to five weeks through regular knowledge-sharing sessions.
- Brainstormed DevOps strategies achieving a faster project delivery and met technical requirements for three major software releases.
- Delivered critical updates on time, ensuring SLA compliance for key clients, including a financial institution with over 2,000 branches and 70,000 employees.

Intern

The Compuflex Corporation, Springfield, NJ | 2017-2018

- Modernized and built company website including Blog, Customer Portal and CMS plugins using Laravel / PHP (OctoberCMS).
- Collaborated with team members to create sample teller application demos to improve QA testing and automation time for the screen engine.
- Collaborated with marketing team to design and develop a custom blog plugin for posting updates about the company and products.

PROJECTS

Jersey Cat Cafe, E-Commerce Solution

Jersey City, NJ | 2023

- Designed and developed a custom e-commerce solution for a local cat cafe integrating the PayPal API and eliminating the need for more expensive platforms. Complete with a REST API, SQL database, NoSQL database and a UI. Built in React and Node.js.
- Used AWS Lambda for serverless operations.

SurvElect, Voter Database Software

Linden, NJ | 2018

- Crafted and maintained a robust MVC web application using Node.js, React and TypeScript that included user authentication, a voter search engine, an efficient phone-banking system, and advanced export functionalities using data from 25,000+ registered voters.
- Managed cloud-based services in AWS using Lambda including EC2, Route 53, RDS and Amazon SES reducing campaign costs.
